

Aventuras 2000 committed to the environment

Its new buses emit 94% less pollutants

Aventuras 2000, committed to the environment, has new buses that emit 94% less polluting! Aventuras 2000, consistent with its Sustainability and Environmental Protection Policy, has made a significant investment for the renewal of its bus fleet, acquiring VOLVO brand vehicles model B270F that, in addition to its unbeatable comfort and safety features that it provides to passengers, its operation complies with the demanding EURO 5 standard, **reducing the pollutants emitted by up to 94% compared to other buses outside of these standards.**

The VOLVO B270F buses acquired by Aventuras 2000, offer a "Selective Catalytic Reduction" (SCR) technology and use "AD Blue" in their combustion process, causing the total fuel to be burned in the generation of force and power, resulting in less gases & pollutants for the environment and significant overall fuel savings.
